FEBRUARY 19 2024

BIDDING SOFT CLOSES AT 7 PM

Racehorse Style Close with Extended Bidding

www.olefarms.com

Kelly & Anna and Graham & Leslie Olson

OUR GOALS AT OLE FARMS

1. Profitability:

At Ole Farms we breed cattle to maximize long term profitability. If the cattle work for us they should work for you.

2. Phenotype:

We strive to produce thick, deep bodied cattle with capacity and extra back fat, the kind that do not need pampering on a forage-based diet and can graze through the snow.

3. Harsh Environment:

At Ole Farms we raise cattle in volume using what our land produces. We are normally in a high rainfall region, but a lot of our pasture is on low land. Forage volume is good, but quality is low. Winters are bitter and we use by-products grown on our land for feed. Cattle are developed under tough conditions here, destined to work in any environment.

4. Frame Size:

Extensive research has proven what we always have believed – pounds of calf weaned per acre is maximized with moderate cows. Twelve hundred and fifty pound cows seem optimum for us. We believe the bigger the cow the less the profit.

5. Calving Ease:

We calve in May and June, in sync with nature. In order to pasture at the appropriate time, we calve in 20-to-40-acre fields, next to our summer pastures. We have up to ten calving groups. Calving ease is a must and we pull very few calves. Heifers are checked once or twice a day. Only live calves pay. Difficult calving eats up labor. Contrary to what some believe, you can get performance with calving ease and maternal traits.

6. Structure:

Cattle with feet and udder problems are culled. A cow must raise a calf without help. We udder score cows at calving, and we NEVER trim feet.

7. Data:

At Ole Farms we use Herd Trax to keep track of all our cattle. Cows are weighed twice a year.

8. Mother Nature:

We believe Mother Nature can best judge our cattle. We do not let heavy feeding mask our problem cattle.

9. Volume:

We plan to calve 1465 cows this spring, 1250 of them purebreds. We don't have time for high maintenance, nor should anyone in the cow/calf industry.

10. Sharing in the Excitement of Agriculture:

At Ole Farms we are continuously looking for new ideas to improve our operation. We test new ideas and implement those that are profitable. We like to share ideas with others and participate in a profit centered performance group of producers, where the goal is to help each other. We would be happy to share any of our ideas with you.

OLE FARMS

Kelly & Anna

Graham, Ace, Leslie, Carl

Wow, what an exciting time to be in the cattle business! The North American cow herd is at the smallest numbers in years. Prices for calves and yearlings are strong because of this tight supply. Producers who have maintained their herds are now benefiting from these good prices. Some producers in drought affected areas are facing some hard decisions, but the industry in general is hopeful and optimistic.

Right now the beef cattle industry is getting the price signal to expand. Once that expansion begins, there will be a 2 or 3 year delay until the beef supply adjusts. So we expect these favorable calf prices to last at least that long. In recent years a considerable number of acres have been switched over to grain production. It will be difficult to get those acres back in grass. We expect, rather, that expansion will come from existing producers making better utilization of their current land base. We expect as the industry expands that the availability of good bred cows will be short, and that they will get expensive. This might be the best year to retain a few more of your best heifer calves.

The industry has good prices now. It's imperative not to allow our costs to creep up until they match these high prices for cattle. At OLE Farms we are always looking for ways to reduce our costs, especially the biggest single cost, winter feed. Low winter feeding costs depend on highly productive feed crops. These highly productive feed crops depend on healthy soils. Healthy soils depend on having cattle out on the fields year round. In summer, we follow a rotational grazing scheme. In winter, we use swath grazing and graze corn stover. When we feed cattle, especially the calves and yearlings, we use portable bunks out in the field to promote good manure distribution. This makes for good nutrient cycling and improves our soils.

To thrive in this production system, a beef cow must be moderate framed, deep bodied and capacious. They must have good feet and udders. They must be able to forage in the winter through the snow. They must have the genetics to have an adequate amount of back fat. At Ole Farms we stress the maternal characteristics that make for a highly functional herd in our production system. At Ole Farms we have silaged forages such as Red Clover and Alfalfa for generations, and have used Oats and Triticale as swath grazing. About 20 years ago we began grazing standing corn. All of these methods have reduced our cost of winter feeding, compared to traditional haying. We have been trying intercropping Rye grass in grain crops and the most recent innovation is to harvest the cobs on our corn crop as earlage. The stover left over is grazed by our cows. We believe that in the harvesting process the corn stalk is broken and this prevents starch from migrating into the roots. This winter we have been getting 200 cow days per acre from the stover and we have harvested earlage worth 2/3 of the cost of producing the corn crop. This looks like a game changer for us!

This year at OLE Farms was a good production year. We had a dry spring, followed by a wet summer, and then a dry fall. The cattle are doing well. We are blessed with a dedicated group of employees that make life enjoyable. We are proud of our offering of bulls and bred heifers for this 19th sale. We sell only 2 year old bulls (approx. 21 months), that have been developed so that they won't melt away on your farm. Our bulls are not pampered, pushed or picked over. Our heifers were AI bred to some of our best, proven easy calving bulls, for April 15th calving. They are ready to work for you. Feel free to visit anytime or call us with questions. We want to share in the excitement of agriculture with you.

How to Participate in the DLMS Farm Gate Timed Auction with Extended Bidding:

1. Visit dlms.ca and follow the link to the DLMS Farm Gate Timed Auction site at www.farmgatetimedauctions.ca, click the LOGIN/REGISTRATION button. First time users will select the REGISTER button from this page. Fill out the registration form to sign up for a free user account and it allows you to select a username and password for use on all Farm Gate Timed auctions. This program will send you text and email messages whenever there is activity on your favorite lots or someone challenges your proxy bid and this is why you will be asked for both your current email and cell phone number. If you are a past participant in the Farm Gate Timed auctions simply enter your username and password to continue. This takes you to a list of both current and upcoming Farm Gate Auctions.
2. You can choose your favourite lots in this sale at this time and the program will allow you to open either all sale lots or just your favorite lots on your screen. Any time there is active bidding on a lot you have identified on your favorite list you will get a text and/or an email noting this activity.
3. The program allows you to place a proxy bid on any sale lot. This in fact protects your interest in any lot of interest for you to a specified dollar value you set, when you may not be able to give 100% attention to the sale. If the lot has a \$2000 bid on it and you place a proxy bid of \$3500 into the system, the computer will bid \$2100 for you but if some one else bids \$2200, the computer will again bid for you, this time at \$2300. The system will look after your interest to a maximum of \$3500. If another bidder is on at \$3600, your proxy will no longer be effective and you will no longer have the winning bid on this lot without once again logging in and bidding again or moving your attention to a second lot of interest.
4. At closing time of the sale the entire sale will extend bidding if a bid is placed on any lot in the sale. Any bid received after close time will extend the sale by the time listed on each sale. In Most cases the time gets shorter the longer in to extended bidding the sale is. When no bidding occurs for the extended time the computer will declare the sale finished.
5. Following the sale the Owner or Sale Manager will invoice all buyers in the sale, please contact the seller with questions or to arrange delivery, pick up or shipping of your purchases.

FAQ:

WHAT IS RACEHORSE STYLE SALE CLOSE?

Racehorse style sale close is when the entire sale stays open in extended bidding.

This type of sale allows you as the bidder to change to a different lot within the same sale if the bidding has gone in to extended bidding.

HOW WILL EXTENDED BIDDING WORK?

When we get to the close out end time the clock for close extends with any bid placed with less than 5 minutes on the clock.

This type of extended bidding turns the end time to more of a soft time.

Extended bidding allows bidders to compete in lots like a real auction and give all bidders the same time to make a decision.

Always follow the clock to see how much time remains in the sale you are interested in.

For more info and assistance with bidding contact
any of the sale contacts listed on the DLMS website www.dlms.ca
DLMS Farm Gate Timed Auctions ~ Mark Shologan Ph: 780-699-5082

Herd Health Program

- Zoetis Animal Health Program
- All cattle have been vaccinated, following Zoetis Animal health protocols
- P.I. (Persistently Infected BVD) - all sale bulls are guaranteed BVD/ P.I. infected free animals
- All bulls sell with a certified semen test prior to delivery

Calving Ease

Star ratings are the subjective estimate of these young bulls' calving ease

CALVING EASE ★★★★★

Likely to have a high level of calving ease based on dam and sire history, actual birth weight and EPD of birth weight

CALVING EASE ★★★

Should be comfortable for use on heifers of the same breed

CALVING EASE ★★

Bull should be used on cows

CALVING EASE ★

Bull should only be used on cows - expect higher birth weights

CATALOG ORDER

We have organized the catalog primarily into sire groupings and then for your convenience by calving ease to allow for easy transition between lots during the sale closing period.

Size Matters

Extensive research by the University of Oklahoma of rangeland cow herds showed that for every 100 lbs a cow is heavier she will wean only 6 more pounds of calf. A cow weight of 100 lbs will need the equivalent of 1.67 lbs of hay or its pasture equivalent per day more. Over 365 days that equates to 610 lbs of dry matter forage for the year. At \$140 per ton that is \$42.70. On a \$.20 slide the extra 6 lbs of calf is worth about \$5.78. Subtract your extra cost of \$42.70 from your revenue of \$5.78 each extra 100 lbs your cow weighs costs you \$36.92 per head per year.

We have been doing foot and udder scores on our entire cow herd since 2014. It is no small feat I assure you.

The extra effort of all these records has helped us identify issues in our bloodlines as well as issues in new bulls used.

Coleman Bravo combines calving ease and performance with a moderate, mature frame size. He is in the top 1% for calving ease, top 1% for docility, top 1% for claw and top 15% foot angle. Bravo was the top seller at Coleman's 2018 sale and an impressive \$450,000 US. His progeny are deep and thick with lots of capacity. They would stand out in any herd.

January 2024 - grazing through the snow - without snow!

At Ole Farms when cows are fed it is always in the field where they will spread nutrients around. We use portable bottomless feed bunks that are easily moved.

25th Anniversary for Graham & Leslie

Got to take my grandsons to an Oiler's game

We try to have a little fun every day!

At Ole Farms we are in the process of eliminating cattle access to water bodies. We have several miles of water pipelines to bring water to various paddocks. We have most dugouts fenced and have recently fenced out a half mile of lake frontage. Clean water is better for the cattle and the environment.

OLE FARMS GRAZING MANAGEMENT

- Rest Period - In our area we need approximately 35 days of rest in the May, June and July period. (That will vary somewhat with conditions.) So if we start grazing May 15 we can't go back to that paddock until June 20. Our goal would be to have all paddocks grazed in 35 days.
- Graze Period - When grass is actively growing cattle will start re-grazing after 3 days. Therefore, we like to stay 3 days or less in a paddock.
- Consequently, if your rest period is 35 days and your graze period is 3 days, you need a minimum of 13 paddocks to satisfy both the resting period and the grazing goals.
- By following these rest and graze rules we can keep our forage in a vegetative state, preventing grass from heading out or going into a reproductive state where quality is diminished.
- Later in the season the rest and graze periods can be longer.

We are ready to work for you

At Ole Farms we "mouth" cows.

In April each year, prior to calving, we mouth our older cows. If they are smooth mouthed ie: teeth missing, we calve them out, wean early and sell them in early September before the fall run.

Red cows on stover

WHY TO BREED YOUR OWN HEIFERS

(And What Bull to Buy)

Bulls and bred females will be in pens on display beginning Friday and going through Monday.

You are encouraged to come ahead of time to view our offering.

Please bring this catalog with you when viewing the offering

Thank You!

Fertility and longevity are arguably the two most important traits in a profitable cow herd.

When selecting a bull, keep in mind the maternal characteristics in genetics of the bull you purchase. That will be very important long term. Some producers choose to buy their replacements rather than breed their own heifers. Unless they are familiar with the program these heifers come from, they won't quite know what they are getting. If the industry is in an expansion phase, these heifers may get very expensive. Assuming that you want to improve your cowherd, I suggest that you select bulls from strong maternal families to use on heifers you've raised.

Imagine that you have 100 cows, and you raise 90 calves. This gives you 45 heifers to select replacements from. If you keep your cows until age 10, you need 13 heifers to replace them. If a couple die over the year, you'll need 15. If you decide you need to replace 5% more for various reasons, you will need 20 replacements each year. In order to improve your herd, you may select heifers from the top half of your herd. This means that if you get 90% bred in a short breeding season, you have the 20 you need. Since you need half of your heifers, you need to use mostly bulls with good maternal traits, and very few terminal sires.

We have on offer over 80 bulls that are calving ease sires. Whether used on heifers or cows, Ole Farms has the genetics needed to lead to long term improvements in your herd.

EPD Definitions

EPDs are an estimation of an animal's breeding value based on its pedigree and performance. EPDs indicate the average performance expected from an animal's progeny in comparison to another animal or to the breed average. They allow for fair comparison of animals' genetics across herds, regardless of environment and management differences.

P = Parental Average EPDs: These are the most basic and least accurate EPDs. They are the best guideline available when calves are first reported and there is no performance data on them yet. Parental Average EPDs are indicated by a P for accuracy and are an average of the dam and sire's EPDs. If a calf has only one parent with EPDs, its Parental Average EPDs will be only half of its one parent's EPDs.

P+ = Interim EPDs: These EPDs utilize the Parental Average EPD information on the calf plus any performance data on file and its ratio amongst its contemporary group. Interim EPDs are indicated by a P+ for accuracy and have a higher accuracy than a Parental Average EPD as they also include some performance data.

% = National EPDs: Calculated in the National Cattle Evaluations (NCEs), these EPDs are the most accurate prediction of breeding value or genetic merit that can be determined from pedigree and performance data submitted. National EPDs are published with numerical accuracies that reflect the quantity and quality of data used in its calculation.

Growth EPDs

BW = Birth Weight: Expressed in lbs, predicts on average how much heavier or lighter than the breed average an animal's calves will be. If the breed average is 3 and an Angus animal has a BW EPD of 5 then on average this animal's calves will be 2 lbs heavier than the breed average.

WW = Weaning Weight: Expressed in lbs, predicts comparative progeny weight at 205 days of age. This EPD reflects pre-weaning growth potential that an animal is expected to contribute to its calves.

YW = Yearling Weight: Expressed in lbs, predicts the differences in progeny performance at 365 days. The YW EPD reflects the animal's calves' potential for post-weaning growth.

Fertility Trait EPDs

Milk = Milk: Expressed in lbs. of calf weaned, this is a prediction of an animal's daughter's milking ability.

SC = Scrotal Circumference: This EPD predicts the average scrotal circumference for an animal's sons. Scrotal circumference is used to gauge a bull's fertility.

CED = Calving Ease Direct: Predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the CED EPD, the more likely it is that the animal's calves will be born without assistance.

MCE = Maternal Calving Ease: Predicts the percentage of unassisted births an animal's daughters will have with their first calves. This is a reflection of daughters' pelvic shape and level of hormonal reactions and stamina during labour. The higher the MCE EPD, the more likely it is that the animal's daughters will give birth without assistance.

Terms & Conditions

CATTLE INSPECTION: All carry permanent identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to sale.

BREEDING GUARANTEE: All cattle are sound and sold with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association shall apply.

MAIL BIDS: May be entrusted in complete confidence to any of the Sale Staff listed.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerk's desk from the appointed representatives on sale day.

TERMS OF SALE: Cash or cheque at par, payable to Clerks of the Sale on Sale Day. No release will be given until satisfactory settlement has been made. We reserve the right to withhold animals from shipment for whom payments have not been received prior to departure times.

ALL PERSONS who attend the Sale do so at their own risk, and the Owners, Sale Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.

GENETIC EVALUATION ANGUS BREED AVERAGES

To evaluate an animal using EPDs it should be compared to the breed average. This is not zero (0) for any trait, rather, it is an average of all the values for animals of that category in the breed, and changes every evaluation. EPD breed averages are calculated for three categories: non parents under 2 years of age, active dams, and active sires.

Average Black Angus EPDs / Red Angus EPDs for all CALVES born in 2022

EPDs:	CED: +3.2	BW: +2.0	WW: +53	YW: +92	MCE: +6.8	MILK: +23	SC: +0.83
